- Easily relocated
- Battery or external power
- Tripod included

Applications

- Environmental & community noise surveys
- Noise around construction sites
- Boundary sound level monitoring
- Industrial site outdoor noise
- Transport noise - road, rail, air

Outdoor Noise Measurement Kit

The **WPK-OPT** provides weather protection and ease of transport for the Optimus Environmental range of sound level meters. It turns the meter into a portable noise monitor that can make unattended noise measurements for up to a week before needing charging.

If you already have an Optimus Environmental sound level meter and calibrator then all you need is the WPK-OPT Outdoor Kit to make the conversion. The meter is fitted into the case with connections to the microphone and power. It is easily removed when you want to use it hand-held again.

If you don't yet have a suitable sound level meter then you can order the kit and meter on this page. See the **More Options** button in the order box above.

We also supply complete outdoor noise measurement kits that include the sound level meter and calibrator. You can see these on our Outdoor Noise Kits page.

Parts Included

The order code **WPK-OPT** includes the following items:

- Weatherproof Case
- Outdoor Microphone
- Tripod
- 10m microphone extension cable
- Rechargeable batteries and charger
